environmental  
bird  control

One of the UK's largest providers of  
specialist bird deterrent systems.

IN BUSINESS SINCE 1998

# Our Story

# ECO Environmental

**Founded in 1998 with a vision of addressing public health issues that can arise from bird guano.**

Throughout the last 20+ years, the Eco Environmental team have worked incredibly hard to ensure that we consistently deliver excellent client satisfaction.

Every bird control problem has a solution that we approach and deliver in a bespoke and cost-effective manner.

We have always strived to create a “family feel” work culture held together by loyalty and tradition. By listening to our employees’ suggestions on how to evolve, we have retained our talent who are always motivated to perform their best work. Retaining our position as one of the UK’s largest providers of specialist Bird Deterrent Systems within the Construction and Civil market is an enviable position.

Our future is very bright and optimistic, our flexible, smart working approach coupled with a healthy work life balance means that our Teams are always moving forward and on hand to help solve all your Bird Control issues.

# Bird Control

# Bird Netting

## Discrete and Effective.

Our humane netting is constructed from heavy duty, non-stretch, stabilised polyethylene and fully protects against UV light damage.

We can supply our nets in various mesh sizes depending on the type of bird species that we are protecting against. Flame retardant netting is also available.

Our Project Managers and Installation teams propose and install our bespoke Bird Netting systems based on site plans or a site survey.

# Bird Spikes

## Adaptable Installations.

Designed for areas of heavy infestation, Eco Bird Spikes are an adaptable and easily installed method of preventing perching and roosting birds from landing on almost any surface.

The angled prongs increase the effectiveness of the Eco Bird Spike, making it difficult for pigeons to land and so moving them elsewhere without harming them.

Eco Bird Spikes are available in various width, prong length, row no. and points to meet all bird types and all levels of infestation.

# Bird Wire

## Subtle and Safe.

Eco's Bird Wire is one of the most discrete and widely used anti-perching systems available in the UK for bird control and bird deterrent solutions. It is often favoured by architects due to its discrete, low-profile appearance.

Bird Wire is a very versatile bird control system and a variety of special components and brackets are available to enable it to be fitted to almost any surface making it a bird deterrent system suitable for many applications.

# Other Netting

# Ballast Netting

A cost effective way to prevent Gulls and Crows from picking up and dropping ballast pebbles from height.

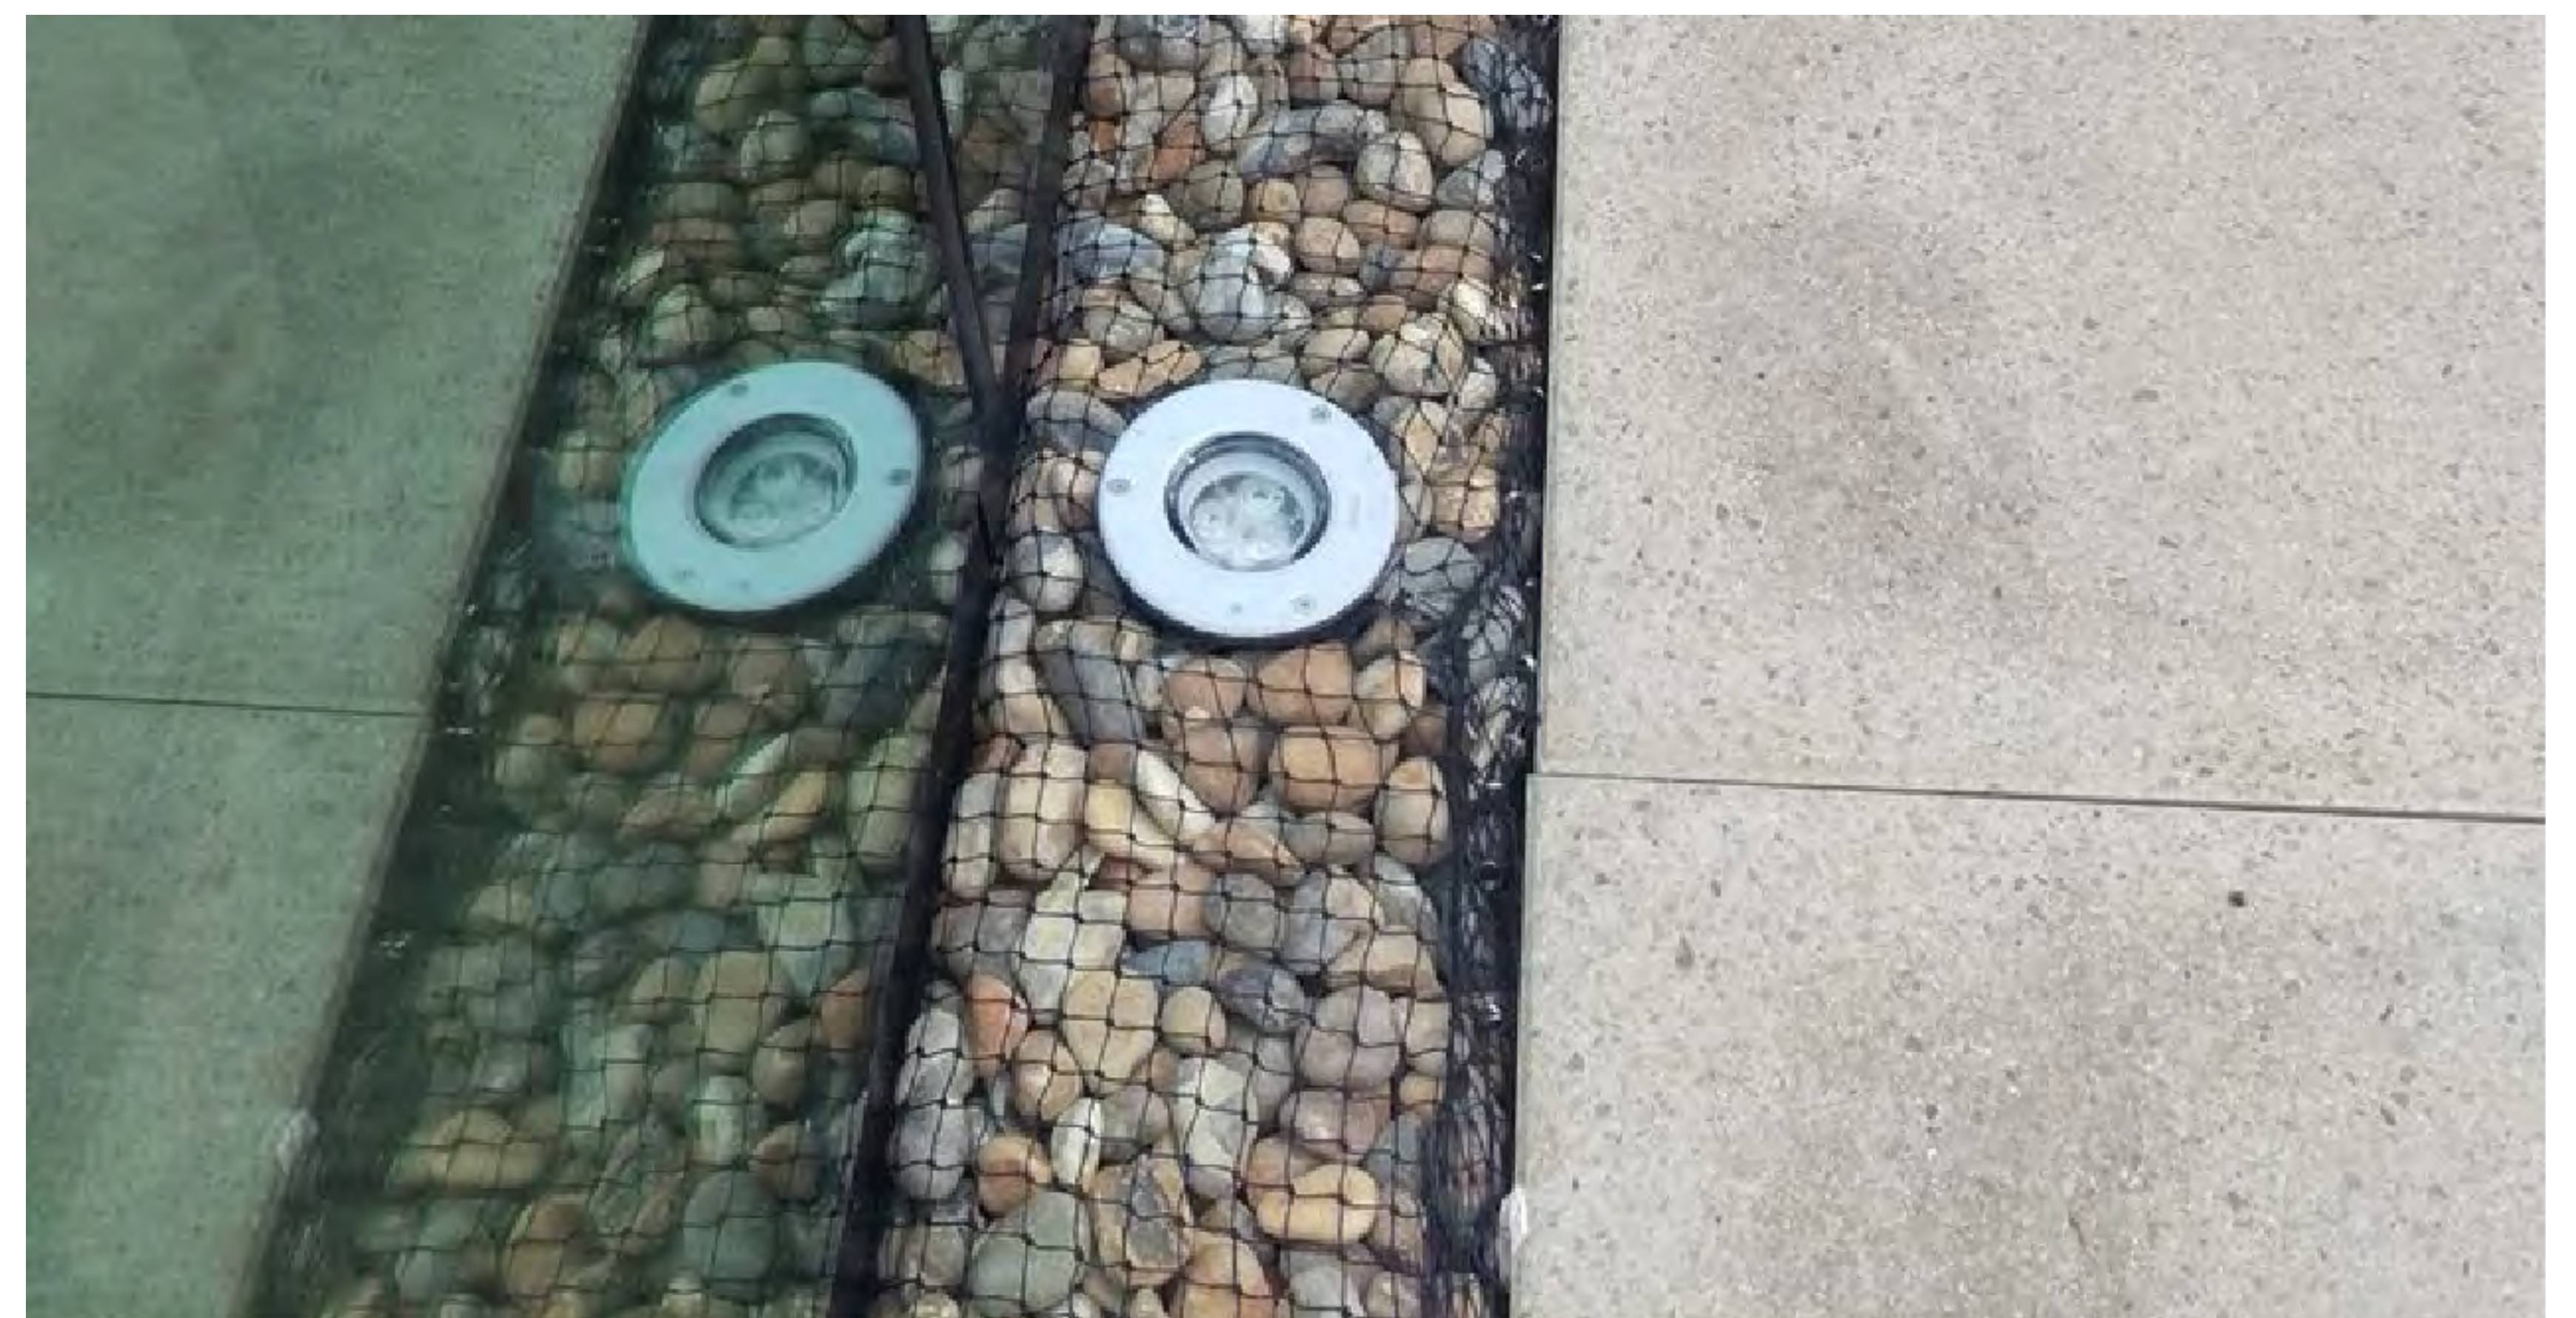

Ballasted rooftops are becoming a popular building option in schools, hospitals and larger office blocks. They provide an attractive, cost effective covering for warm roofs that blend well with a range of architectural styles.

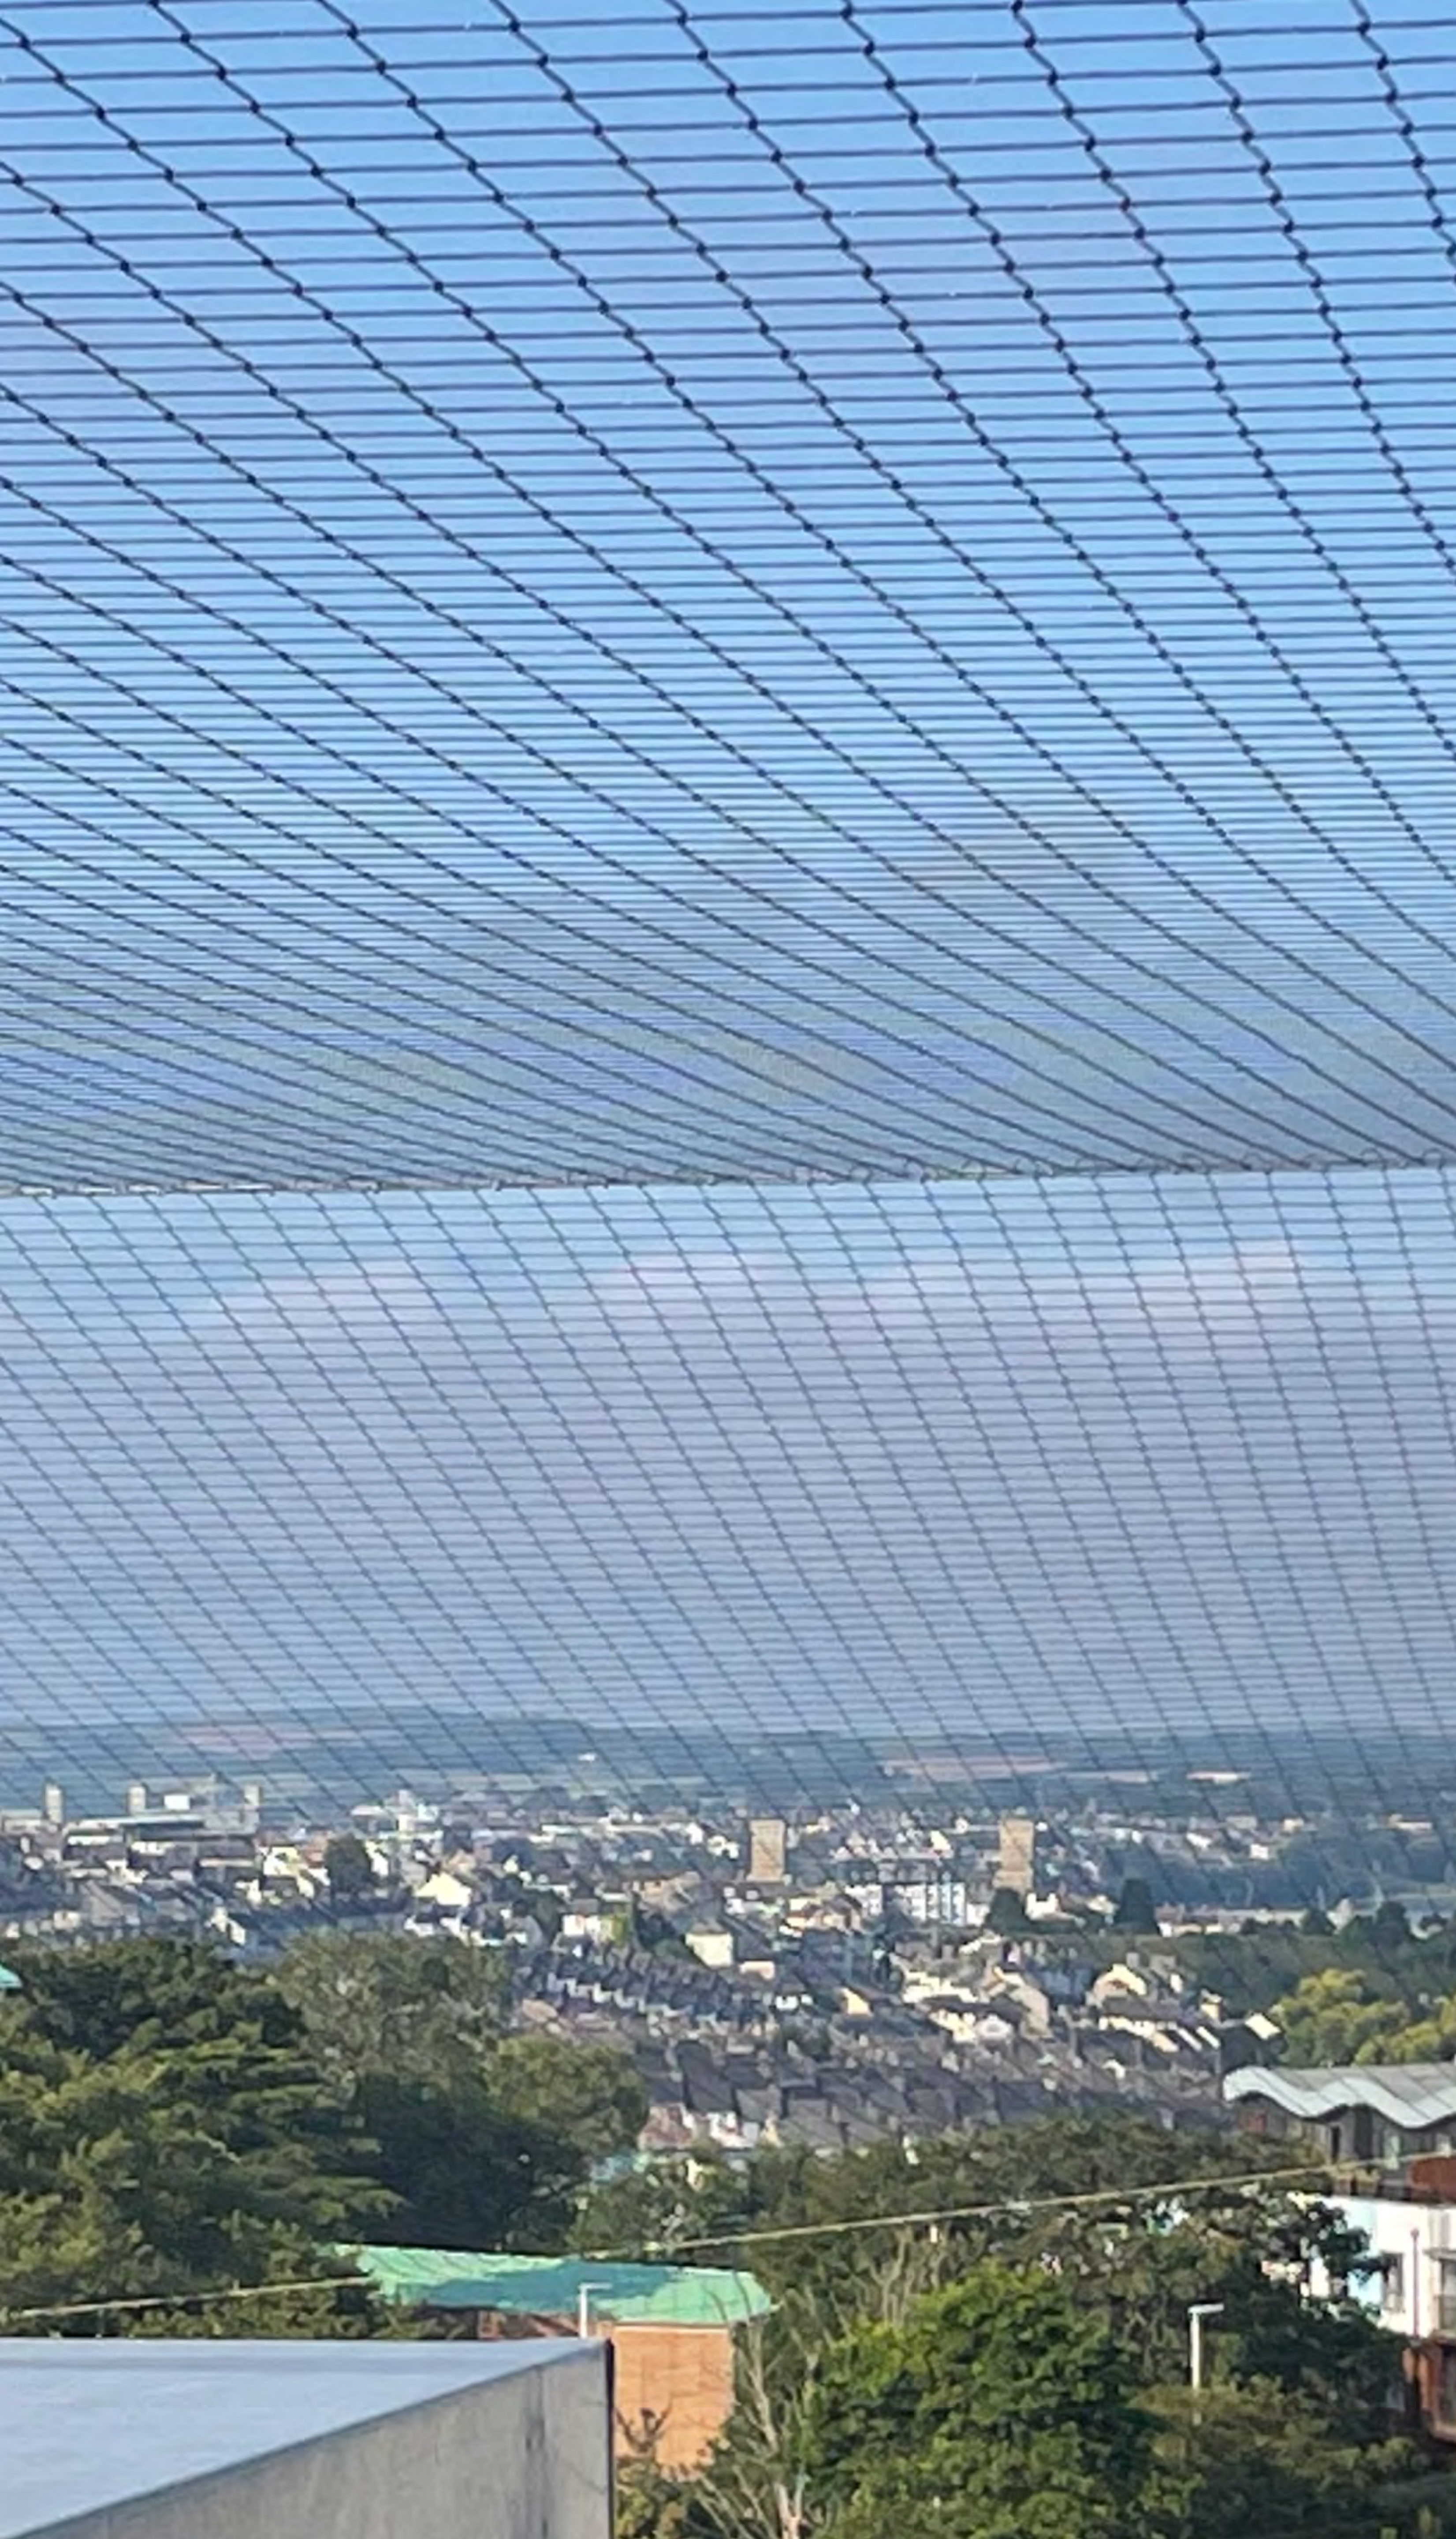

Problems can be quite common on ballast roofing as juvenile birds will often imitate their parents behaviour by picking up the pebble ballast, mistaking them for food. They will then drop the stones from a great height in an attempt to open them.

Falling ballast is an obvious Health and Safety risk to the general public and all who use the buildings and surrounding areas on a daily basis.

We can supply our Eco Ballast nets in various mesh sizes. Colour choices are black, stone and translucent.

Flame retardant netting is also available in black and has a red strand running through it to denote its flame-retardant properties.

# Contraband Netting

Contraband netting has been installed in the exercise yards and sensitive areas of many establishments including HM Prisons.

Over the years we have enhanced our contraband netting, designing it to be considerably stronger than standard bird netting where these systems originated. This is to cater for snow settlement and loading.

Eco's Anti-Contraband Netting Systems comprise of an effective mesh that provides a discrete and impenetrable barrier that protects the premises from drugs and contraband from landing inside sensitive areas such as prison and immigration Exercise Yards.

Historically 19mm flame retardant nets have been installed however the majority of the packages launched in to the yards are tennis ball size and above.
